

BUSINESS WEBSITE CASE STUDY

A complete responsive website concept created for a fictional professional consulting company. The project demonstrates information architecture, reusable component development, accessibility, responsive design, form validation, SEO structure, and deployment readiness.

PROJECT TYPE

Self-initiated portfolio concept. The brand, people, and client scenarios are fictional demonstration content.

MAIN OBJECTIVE

Show how a small consulting firm can present its services with a clear structure, credible visual identity, and an inquiry flow that is usable on any device.

KEY DELIVERABLES

- Six responsive pages
- Validated contact form
- Technical SEO setup
- Reusable component library
- Accessible navigation
- Automated test suite

Pages, navigation, and the inquiry flow

Home page

Services page

Contact form

Mobile menu

Clear information architecture

Six pages with predictable navigation and a single content hierarchy.

Responsive layouts

Mobile-first CSS reviewed from 375 px through 1440 px.

Accessible contact form

Labelled fields, inline errors announced to screen readers, keyboard-friendly.

Reusable UI components

Buttons, cards, sections, headings, and form controls share one API.

Basic technical SEO

Metadata, canonical URLs, Open Graph, sitemap, robots, and JSON-LD.

Performance-conscious implementation

Server components by default, self-hosted fonts, restrained animation.

1440 px

TECHNOLOGY STACK

Next.js 16

App Router, route handlers, metadata API

React 19 + TypeScript

Strict mode, typed content modules

Tailwind CSS v4

Design tokens defined as CSS variables

React Hook Form + Zod

Shared client and server validation

Framer Motion

Fade-ins that respect reduced motion

Vitest + Testing Library

Component and validation tests

Playwright

End-to-end and responsive checks

ESLint + Prettier

Consistent formatting and linting

WORKING PROCESS

1

Planning and information architecture

2

Component architecture and design tokens

3

Responsive implementation

4

Form validation on client and server

5

Automated testing

6

Production build verification

7

Deployment readiness
