

Meridian Advisory — Boutique consulting website

A self-initiated portfolio concept: a production-quality multi-page business website for a fictional boutique consulting company.

This is a self-initiated portfolio concept. Meridian Advisory is a fictional brand. All people, clients, case studies, and outcomes are demonstration content.

Project overview

Meridian Advisory is a fictional mid-market consulting brand focused on strategy, process optimization, analytics, and digital transformation. The website presents a premium, approachable identity with clear information architecture, reusable components, and accessible interactions suitable for professional services marketing.

Goals

- Deliver a sellable consulting-site experience, not a tutorial template.
- Encode realistic copy and typed content modules for maintainability.
- Meet accessibility, SEO, testing, and deployment expectations.
- Provide exportable portfolio screenshots and a case-study PDF.

Challenges

- Balancing visual polish with restrained corporate aesthetics.
- Keeping cards and motion purposeful rather than decorative noise.
- Communicating fictional demo content clearly without weakening the professional impression.
- Wiring form validation end-to-end without external email credentials.

Solution

A Next.js App Router site with a navy/cobalt/amber design system, Fraunces + Source Sans 3 typography, section-based page composition, Framer Motion fade-ins with reduced-motion support, and a Zod-validated contact API that returns a simulated success response.

Pages developed

Home, About, Services, Case Studies, Contact, Privacy Policy, custom 404, plus hidden `/portfolio-showcase` and `/portfolio-case-study` routes for asset generation.

Design system

Tokens for canvas, surface, navy, cobalt, and amber; reusable Button, Card, Section, Container, Heading, form controls, navigation, FAQ, and case-study filters. Original SVG logo mark and hero decision-cockpit illustration.

Technology stack

Next.js (App Router), React, TypeScript (strict), Tailwind CSS, Framer Motion, React Hook Form, Zod, ESLint, Prettier, Vitest, React Testing Library, and Playwright.

Accessibility

Semantic HTML, skip-to-content link, visible focus states, accessible form labels and errors, keyboard-friendly FAQ and filters, and prefers-reduced-motion support.

Responsive implementation

Mobile-first layouts reviewed at 375, 390, 768, 1024, and 1440 pixels for overflow, hierarchy, spacing, and tap targets.

Testing

Unit/component coverage for navigation, FAQ, case-study filtering, contact validation, and critical rendering. Playwright smoke tests for main routes plus scripts for PNG slides and PDF export.

Final result

A cohesive multi-page consulting website ready to deploy on Vercel, with documentation for customization, form provider wiring, and portfolio asset generation.

Self-initiated portfolio concept · fictional brand and demo content · not a real client engagement.
